Recommendations & Next Steps

Priority Fixes

- 1 Replace broken affiliate links**
Update or remove links returning 404/500 errors. Redirect to current program landing pages where available. This directly recovers lost commission revenue.
- 2 Add UTM tracking parameters**
Affiliate links without tracking tags make it impossible to attribute revenue. Add consistent UTM parameters across all outbound affiliate links.
- 3 Reduce redirect chains**
Links passing through 3+ redirects hurt page speed and can drop tracking cookies. Replace with direct affiliate URLs.
- 4 Implement ongoing monitoring**
Affiliate links break regularly due to program changes, URL updates, and merchant site changes. Automated scanning catches breaks before they cost you money.

About This Report

This audit was produced with the same scanner behind the monthly Link Rot Index — a public 50-site study of link and attribution health across established affiliate sites. Every issue listed is fixable by hand using the tables above; nothing in this report requires our tool.

If you'd rather it be checked automatically: linkrescue.io monitors your links daily, flags stripped affiliate tags before they cost you commissions, and starts free (Pro from \$29/mo).
